CATERING DEPARTMENT

MATCHDAY STAFF

SEPTEMBER 1998

We are recruiting Catering Staff for the 1998/99 season

★ ★ ★

We are looking for enthusiastic, hardworking people to work on matchdays only.

★ ★ ★

We carry out full training on the job

★ ★ ★

We offer excellent rates of pay including bonuses

★ ★ ★

If you have initiative, and enjoy working as part of a team within a busy environment come and join us.

★ ★ ★

If you are interested and would like to apply please ring 0171 231 5773 during office hours.

Wildlife doc finds butterfly

A NEW species of butterfly has been discovered in the Andes by a Wandsworth naturalist.

The species, found in the mountain forests, has never before been seen by anyone from outside the region.

Dr Paul Toyne from Wandsworth, an international conservation officer for the World Wide Fund for Nature, spent five years researching wildlife in an area which is constantly

DISCOVERY OF NEW SPECIES MEANS MORE CASH FOR WWF

by **ALEX TATE**

under threat.

He hopes the evidence his team gathered of important and rare species will persuade the government of Ecuador to stop any more trees being cut down.

He said, "We were involved in a scientific study based in south-west Ecuador looking at rare parrots.

"But the area was under threat and we wanted to prove it was important for other types of wildlife, so we started making an inventory of all the species of butterfly.

"We found 280 different types and the one I found was a completely new species."

Traditionally anyone who discovers a new species has it named after themselves - but in a bid to raise cash for further expeditions Dr Toyne held a raffle to name his butterfly.

It was won by six-year-old Isobel Talks, from Hertfordshire, through the competition run by the WWF.

The species, which will be named Isobel's Butterfly, is a

Pronophila, is brown and has a wing span of eight cms. It was found in Podocarpus National Park - the only protected area in the region.

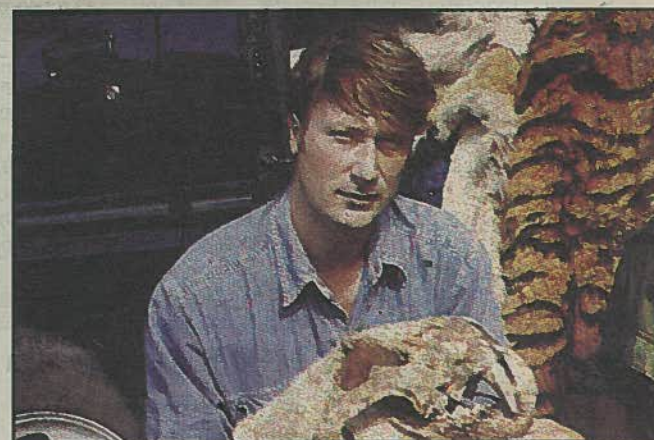

Dr Toyne, of Limes Gardens, said, "Already 90 per cent of the forests in the area have been destroyed.

"They are cut down and used as agricultural land but after two years the plots

can't be used any more because of soil erosion - so the farmers chop more.

"We know a fair amount about the world's butterflies but there's still species being discovered when people go into isolated areas.

"We wonder what we might be missing if habitats are destroyed before we can document them."
